## Features & Capabilities

Q: Once the report was set with confidential label, I'll still be able to share my screen with other users who don't have permissions and also take screenshots?

A: based on the permissions that are set on the label, if export is set to no then you won't be able to screen share

Q: Can a file from Power BI service be exported to Excel?

A: Yes, the PowerBI report can be exported to Excel, and if a label has been applied to the report it will also be applied to the Excel export.

Q: Will I be able to share my screen directly from Power BI and also take a screenshot to share with anyone?

A: *That depends on the label permissions set on the Power BI.*

Q: Is the sensitivity label tied to a dataset?

A: *Yes it can be applied to a report or dashboard or Dataset and dataflow –*

*<https://docs.microsoft.com/en-us/power-bi/admin/service-security-apply-data-sensitivity-labels>*

Q: Can we enforce labels for all artifacts deployed in an Enterprise Premium Power BI workspace?

A: *Yes, you can set mandatory labels.*

Q: Can a report have public label even when it is connected to a dataset with confidential label?

A: *There is a preview feature now that controls downstream inheritance -*

*<https://docs.microsoft.com/en-us/power-bi/admin/service-security-sensitivity-label-downstream-inheritance>*

Q: What happens if we use a dataset which contains a different set of sensitivity label? For example, if the file comes from another organization which has a different set of labels.

A: *If the other org is part of the permission set of the label then they will be able to consume it. If they aren't, they won't be able to.*

Q: Can you enforce multi-factor authentication based on MIP?

A: *We have Conditional Access Authentication context in preview which can be used to enforce this.*

Q: Will we be able to apply automatic labeling based on sensitivity types to Power BI?

A: *Auto labels are not supported for PowerBI today.*

Q: When will you be looking at the auto labeling on PowerBI?

A: *This is on our roadmap.*

Q: Can MCAS utilize the MIP labels to trigger conditional policies?

A: *Yes, MCAS can use MIP labels for conditional access app control policies*

Q: Can a report have public label even when it is connected to a dataset with confidential label?

A: *Yes, that is correct. If the user is able to change the label they can downgrade it to public. This is audited and can be setup to also require justification to downgrade -*

*<https://docs.microsoft.com/en-us/microsoft-365/compliance/sensitivity-labels?view=o365-worldwide#label-priority-order-matters>*

Q: I am new in Power BI service and Power BI desktop, do I always have to start on desktop 1<sup>st</sup>

A: *You can start in the web, but desktop has more capabilities and data connections.*
